

AUTODESK BUILD QUICK START

www.cadline.co.uk

cadline

Overview

Autodesk Build puts critical information into the hands of the key people on a construction project, helping to improve quality, safety, commissioning and tracking for capital projects of all types.

The objective for this quick start is to deliver an Autodesk Build environment, configured to enable your project team to access the latest information and manage construction activities effectively such as safety, quality, requests for information, submittals and more. We will deliver a fully configured system and our construction specialists will spend time on your sites to make sure your project is successfully adopted.

SPEAK TO ONE OF OUR SPECIALISTS: **01784 419922**

Advanced support

Our Autodesk Build experts are on hand to help you manage, adopt and extend your system beyond implementation. Project data, files and models are an expanding and growing asset and we are there to offer the right advice as the demands on your environment increase. Further interoperability issues may be a consideration as will the need to extend access to field based users. Support includes:

- Ongoing file and data structure
- Model federation
- Project configuration
- User access and permissions
- Mobile access and extending project use
