

BIM COLLABORATE QUICK START

www.cadline.co.uk

cadline
a **vinzero**™ company

Overview

ACC COLLABORATE allows you to connect your building project teams with federation and clash detection of Revit, Civil 3D & Plant 3D models. It also assists with Building Information Modelling projects and helps resolve coordination issues faster, whilst advancing the project in real-time.

The objective of this quick start is to deliver an optimised BIM Collaborate implementation, configured to enable your organisation to federate and clash detect effectively on shared projects with other team members. We will develop and train you on new workflows allowing you to efficiently work with others concurrently on Revit models, as well as communicate with the wider project team. Track changes

as they happen as well as visualising in 2D and 3D. It also creates an optimised environment, configured to enable your organisation to visualise effectively on shared projects using multi-disciplinary, federated building information models and manage design coordination issues.

Account Administration

Project Administration

Design Collaboration

Session 2: Administration Training & Project Configuration for System Administrators

- Account administration
- Project creation and activating services
- Project folder structure and desktop connector
- Uploading and accessing information
- Security and permissions
- Marking-up and sharing comments
- Reviews
- Design change analysis
- Design Collaboration Module
- Insight and Dashboard analytics
- Reporting
- Coordination space set up

Session 1: Existing Workflows

- Review of Project Stakeholders
 - Working with internal project team members
 - Collaborating with external project teams
- Review changes to models on mobile devices
- Identify Functional Requirements
 - Federating models
 - Establishing clash detection rules

SPEAK TO ONE OF OUR SPECIALISTS: 0330 551 9420

Session 3: User Training

- Updating clash results
- Reporting Clashes from Navisworks
- Desktop connector
- Marking-up and sharing comments
- Meeting Minutes
- Design change analysis
- Insight and Dashboard analytics
- Reporting

Session 4: Platform Adoption & Project Support

- Extending the project team to other office locations and organisations
- Live project system configuration and modification
- On project user adoption training

SPEAK TO ONE OF OUR SPECIALISTS: 0330 551 9420

Advanced Support

Our BIM 360 experts are on hand to help you manage, adopt and extend your system beyond implementation.

Project data, files and models are an expanding and growing asset and we are there to offer the right advice as the demands on your environment increase. Further interoperability issues may be a consideration as will the need to extend access to field based users. Support includes:

- Ongoing file and data structure
- Model federation
- Project configuration
- User access and permissions
- Mobile access and extending project use
